XtraKey (product review) — 49:5

Yamada, Hisao (Univ. of Tokyo), keyboard finger travel difficult to measure — 45:1

Zarchy, Andrew (letter to editor) — 52:2

# **The Complete Back Issues of *Dvorak Developments***

*Edited by Randy Cassingham*

The Dvorak keyboard is an alternative layout to the 19th Century "Qwerty" layout commonly found on typewriters and computers. Dvorak is faster, easier to learn, easier to use, and less awkward than Qwerty. While the Qwerty layout has, so far, prevailed, the Dvorak has always had a "grassroots" following of adherents who believe that it will someday be Dvorak's day.

*The Complete Back Issues of Dvorak Developments* is a compilation of the thirteen issues of the outspoken newsletter published between 1985 and 1990. It helped to "carry the torch" of the Dvorak movement by promoting products which support the Dvorak, by supporting the Dvorak's early users, and by advocating the implementation of the Dvorak by American businesses, schools, and government.

Randy Cassingham is one of the leading experts on the Dvorak keyboard. A professional writer, he is the author of *The Dvorak Keyboard*, the only book about the ergonomic, language-based keyboard. His long-time efforts to promote the Dvorak are largely responsible for the increasing popularity of the alternate layout.
